

If you've had COVID-19, you should still get the vaccine because:

Experts don't know how long you're protected from getting COVID-19. It's possible—although rare—that you could be infected with the virus that causes COVID-19 again.

COVID-19 vaccines are safe and effective, but there are situations when you should wait to be vaccinated.

Learn more about CDC guidance for when you can be around others after having COVID-19. Visit [CDC.gov/coronavirus/2019-ncov/if-you-are-sick/end-home-isolation.html](https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/end-home-isolation.html), or use your smart phone to scan the code.

- You're having COVID-19 symptoms.
- You're recovering from COVID-19 and had symptoms—wait until you've met CDC guidance for when you can be around others.
- You're recovering from COVID-19 and never had symptoms—wait until you've met CDC guidance for when you can be around others.
- You've had one dose of vaccine, but got infected before your second dose—get the second dose after you've met CDC guidance for when you can be around others.
- You were treated for COVID-19 with monoclonal antibodies or convalescent plasma—wait 90 days before getting a COVID-19 vaccine, and talk to your doctor if you're unsure about your treatment or if you have other questions about the vaccine.
