Final Design Underway

Orange County began final engineering design and preparation of construction plans in October of 2014, for the **Bates Road Bridge Replacement and Roadway Approaches Project (from west of Glyn Road to west of Patel Drive)**. Completion of the plans is scheduled for September 2015.

The existing Bates Road Bridge was constructed in 1962. A recent inspection of the bridge, conducted by Florida Department of Transportation, revealed signs of deterioration and a need for replacement. Construction phase schedules have not been determined at this time. A second newsletter will be distributed when the project advertises for construction bids. A small group meeting will be held for the property owners in the future, date and time to be determined.

Project Summary

Improvements will consist of a new bridge with pedestrian accommodations on each side. The new bridge will be raised approximately two feet in order to provide the proper clearance over the Crane Strand Canal. Additionally, portions of Bates Road abutting the bridge to the east and west will be reconstructed to accommodate the raised bridge profile.
