

FEMA Elevation Certificate

Please note that this project has been identified as being developed in the flood plain and that a properly completed FEMA Elevation Certificate will be required at two points during construction which are:

- The **first** Elevation Certificate is to be provided to the Building Division while the building is **under construction** as part of the Building Division's 135 Inspection; which is to be schedule after the lowest finished floor has been placed. Additionally, scheduling of any vertical type inspection will not be possible until a 135 inspection has been completed and approved.

Note: Section C of the Elevation Certificate must be marked as **Building Under Construction**.

Contact the Division of Building Safety @ 407-836-5556 with questions regarding the 135 type inspection.

- The **second** Elevation Certificate is to be provided to the Stormwater Management Division (407-836-5612) once construction has been completed.

Note: Section C of the Elevation Certificate must be marked as **Finished Construction**.

The latest FEMA Elevation Certificate form can be downloaded at the www.fema.gov web site.

Inspection Type Codes

135 Elevation Certificate (Building Under Construction) - Building Department

Floodplain Permit

FEMA Elevation Certificate (Finished Construction)
